INVENTORY AND NOTES:

Items 4-1, 6-1, 8-1, 18-1, 20-1, 21-1, 24-1 were stickers removed from bump stocks pending direction from the contributor regarding processing while the guns they were removed from were sent on to FTU. The contributor said they didn't need to be processed (10/24/2017.)

Item 12-1 was removed from Item 12, but is not suitable for latent examinations

Items 456 and 457 were captured after IND (before humidity) as object shots – Set 35

Item 468-2-1 (tape) is attached to Item 468-2 (plastic) and Item 468-3 (plastic). The plastic is believed to be a way to preserve the adhesive side of the tape and won't be processed. Same with Item 468-4 (plastic; tape had already been removed by TEU.)

Items 3014 to 3050, Item 3554 – unused elimination cards; retained in DW

Item 3222 (toolbox) contained an envelope with writing on it (“1 screwdriver...1 Phillips screwdriver...4 drill bits...1 screw”) and items. It was determined that it was placed there by our personnel in the field. Envelope was opened to continue processing and not itemized per [REDACTED]

Item 3354 – Object shots captured [REDACTED] on 10/10/17; see DW Set 97

KNOWN TABLE NOTES:

PADDOCK (A)

EFTS files – DW Set 6

Ten print card – DW Set 79

Major case prints – DW Sets 92-94

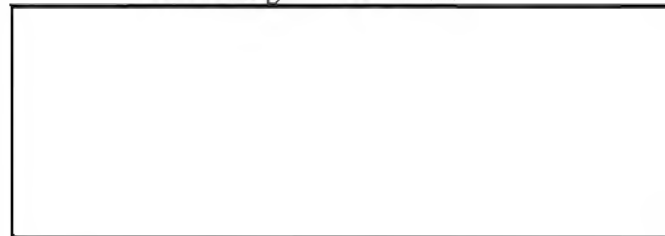

Disc of images of hands – DW Set 89

Composition prints – DW Set 96

LVMPD images – DW Set 125

FBI LABORATORY LATENT PRINT OPERATIONS UNIT CASE NOTES

10/05/2017-01/10/2018

PROCESSING:

Note: FIU Req. #7206 was sent to be captured but due to the location of the potential prints and since this was part of the initial exam before TEU/DNA, it was determined in the best interest of the case to send Item 498 along to TEU/DNA and capture at a later date (not sent later after closer exam.)

This report addresses the request for friction ridge print examinations. Items listed with asterisks (*) on pages 1 through 54 of this report were not examined as they are not appropriate for friction ridge print examinations. The contents of items listed with daggers (†) on pages 1 through 52 of this report were not examined as they are not appropriate for friction ridge prints examinations.

RESULTS OF EXAMINATIONS

See Appendix A for key terms and the methods, limitations, and interpretations regarding the results of examinations.

The following table provides information regarding the known records of the individual(s) for comparison. Unless otherwise indicated, record(s) were obtained from NGI. The letter designation will be used throughout this report:

Individual(s) for Comparison			
Letter Designation	Name	UCN/DOB	Record Information
	STEPHEN CRAIG PADDOCK	April 9, 1953	Record obtained from OGA, Item 3159, Item 3552, and Item 3553 identified to located record by <input type="text"/>

Total prints claimed:	187										

b6
b7C
b7E

Automated searches were conducted on suitable print(s), but no additional identifications were effected. Print(s) were added to the Unsolved Latent File (ULF) and shared with other agencies, and you will be advised in a separate report if an identification is made.

No known palm prints for [REDACTED] were located for comparison to the unidentified palm print(s) or impression(s).

b6
b7C

Individuals were compared only to specified evidence as appropriate.

There are no additional prints to be claimed on the remaining evidence.

Some unidentified prints were compared with each other as requested, but no identifications were effected

REMARKS

The identity of an individual for comparison is based on the biographical information associated with the known record Fully and clearly recorded fingerprints and palm prints recorded in connection with this case may be necessary for:

- Confirmation that the appropriate known record was examined (for testimony purposes)
- Further comparison of any inconclusive results, paying particular attention to:
 - Extreme tip areas of the fingers
 - Extreme side areas of the fingers
 - Lower joints of the fingers
 - Area of the palms just below the fingers
- Comparison when known records were not located at the time

Recorded prints should be submitted to the FBI Laboratory's Evidence Control Unit with correspondence referencing FBI Laboratory number 2017-02788-8.

Additional requested comparisons in this submission were stopped as these examinations were determined to not be probative to the case. Item 3014 through Item 3050 and Item 3554, submitted known records, were not examined in the Latent Print Operations Unit. Known records for additional individuals requested for comparison were not retrieved. Comparison of unidentified latent prints to one another were not completed

In accordance with the Latent Print Units' standard operating procedures, the friction ridge prints that underwent additional quality assurance checks were reviewed as follows:

UNCLASSIFIED

APPENDIX A

Explanation of Key Terms

Claimed Print - A print is claimed when sufficient reliable information may be present such that an identification decision could be reached.

The anatomical source of a claimed print is designated as follows

- Fingerprint - coming from any part of a finger and designated as #1 through #10 on a standard fingerprint card
- Palm print - coming from any part of the palm area of a hand and designated as LP or LPP for left palm and RP or RPP for right palm
- Toe print - coming from any part of a toe and designated as #1t through #10t in the same manner as a standard fingerprint card
- Footprint - coming from any part of the sole of a foot and designated as LFtpt for left foot and RFtpt for right foot
- Handprint - coming from fingerprint(s) and palm print that appear to be deposited by the same touch and designated as LHP for left handprint and RHP for right handprint
- Impression - coming from an anatomical region that cannot be determined and may have come from any of the above sources

The claimed print detected on an item of evidence is assigned a print number, 'P'. The print number may be used in conjunction with 'I', 'O', or 'X' (e.g. Item 2 PX3) as follows

- 'I' may be used for prints captured on the inside or adhesive side of an item
- 'O' may be used for prints captured on the outside or non-adhesive side of an item
- 'X' may be used for prints captured on an item

NGI - Next Generation Identification system, the FBI's national friction ridge print database

OGA - Information sharing efforts with Other Government Agency

UCN/DOB - Universal Control Number (formerly FBI #)/Date of Birth

Methods, Limitations, and Interpretations

Friction ridge skin consists of ridges, which are raised portions of skin, and furrows, which are the valleys in between the ridges. Friction ridge skin is found on the fingers, palms, and soles of the feet. A friction ridge print is a transfer of the ridge arrangements from the friction ridge skin onto an item. Items of evidence submitted for friction ridge print examinations may be examined visually, examined with various light sources, and processed with chemicals and powders to detect the presence of friction ridge prints. The specific sequence of examinations and processes depends upon the nature of the evidence.

Friction ridge print examinations are conducted using Analysis, Comparison, and Evaluation (ACE) (1), which includes an assessment of the quantity and quality of the information present. The steps of ACE are applied to friction ridge prints as appropriate.

Analysis is the assessment of a friction ridge print by a qualified examiner, accounting for the quantity and quality of the features detected in the print. An examiner will assess the types of features and the spatial relationships of the features to one another, which may be affected by factors such as pressure and movement when the print is transferred (2) (3). A print is claimed when sufficient reliable information may be present such that an identification decision could be reached.

A thorough analysis is conducted on friction ridge prints prior to conducting comparisons. Analysis is documented by marking observed information in accordance with the Latent Print Units' standard operating procedures (4).

Comparison is the direct side-by-side observation of claimed friction ridge prints to determine whether the information observed during Analysis is in disagreement or agreement between two prints. When determining if features correspond, an examiner accounts for variation in the appearance of the friction ridge prints due to factors such as pressure and movement (2).

Evaluation is the formation of a conclusion based on the examiner's observations, assessments, and documentation generated during the analysis and comparison of the friction ridge prints. Decisions that may be reached are as follows:

- Identification is the determination that two friction ridge prints originated from the same source because there is sufficient quality and quantity of corresponding information. While an identification to the exclusion of all others is not supported by research, studies have shown that as more reliable features are found in agreement, it becomes less likely to find that same arrangement of features in a print from another source (5).
- Exclusion is the determination that two friction ridge prints did not originate from the same source because there is sufficient quality and quantity of information in disagreement.

- Inconclusive is the determination that an identification or exclusion decision cannot be reached because there is insufficient information in the known print. Additional recordings from the compared individual may allow for a conclusive decision to be reached.
- Latent Inconclusive is the determination that an identification or exclusion decision cannot be reached because there is insufficient information in the claimed print. Additional recordings of the individual are not expected to allow for a conclusive decision to be reached.

While the examination process is subjective in nature (6), the Latent Print Units have quality assurance measures in place to minimize variability and reduce the chance of error. Examples include but are not limited to verification and blind verification, which are implemented in accordance with the Latent Print Units' standard operating procedures (4) (8).

- Verification is the independent application of ACE to a friction ridge print by another qualified examiner
- Blind verification is the independent application of ACE to a friction ridge print by another qualified examiner with limited awareness of the details of the case and no knowledge of the conclusion of the primary examiner.

There is no meaningful predictive rate of error for the entire comparison process (9) (10); however, recent studies have demonstrated that examiners reach accurate and reliable conclusions under specific test conditions (7) (11) (12)

The presence of a friction ridge print on an item of evidence indicates contact was made between the source and the item. The presence of a friction ridge print alone does not necessarily indicate the significance of the contact or the time frame during which the contact occurred

Due to a variety of factors, the recovery of friction ridge prints on items of evidence is not always successful. A lack of friction ridge prints on an item or the exclusion of a friction ridge print from a given source does not necessarily mean that the given source did not come into contact with the item.

Details:

By way of background, on October 1, 2017, Stephen Paddock opened fire on the Route 91 Harvest Musical Festival taking place on the Las Vegas Strip. Paddock fired more than 1,000 rounds from a suite on the 32nd floor of the Mandalay Bay Hotel and Casino. 58 people died as a result of the shooting and hundreds more were injured.

Paddock had accumulated wealth by buying and selling apartment complexes around the country. One such complex was Central Park

UNCLASSIFIED

UNCLASSIFIED

Title: (U) No set lead.

Re: 4-LV-2215061, 01/25/2018

Apartments in Mesquite, Texas. Paddock and his family owned the complex until approximately 2012 when the complex was sold. Paddock used the money from that sale to buy dozens of weapons that were ultimately used in the shooting.

In December 2017, the Las Vegas Metropolitan Police Department (LVMPD) received a manila envelope containing copies of 11 letters purportedly [REDACTED] Stephen Paddock. The letters were purportedly found in a vacant office building in Mesquite, Texas and mailed to LVMPD by [REDACTED]. The envelope containing the letters did not have a return address and was not postmarked therefore it is not known where the package was mailed from.

[REDACTED]
[REDACTED]
[REDACTED] FBI [REDACTED] assisted with the revocation and currently has an ongoing case against [REDACTED] originally [REDACTED]

The above mentioned letters are dated prior to [REDACTED] [REDACTED] and prior to the shooting. Some of the letters are [REDACTED] Paddock [REDACTED] [REDACTED] One such letter [REDACTED] supposedly posed by Paddock in the past [REDACTED]

[REDACTED] said in the letter that he did not like to talk about it [REDACTED]
[REDACTED]
[REDACTED]

[REDACTED] of the letters are electronically attached to this IC along with the cover letter included with [REDACTED] letters and a picture of the envelope.

Writer spoke with Investigative Specialist [REDACTED] [REDACTED] was not aware of [REDACTED] when contact was first made but [REDACTED] advised that [REDACTED]

[REDACTED] around the time
the envelope would have been mailed and [REDACTED]
[REDACTED]

Based on the above, Las Vegas Division respectfully requests the
[REDACTED] interview [REDACTED] regarding the attached
letters. The purpose of the interview is to authenticate [REDACTED] as the
writer and determine if there was a relationship between [REDACTED] and
Paddock. It should be noted that toll records and email records were
negative for contact between [REDACTED] and Paddock. If there was a
relationship between [REDACTED] and Paddock, a logical investigation should
be conducted to include what Paddock told [REDACTED] about a potential
shooting event.

[REDACTED]
SSA-OIG
[REDACTED]

The Federal Bureau of Investigation is conducting an investigation into the events and circumstances of the massacre that occurred in Las Vegas, NV on October 1, 2017. [REDACTED] has made statements on social media, web blogs and news sites regarding specific information pertaining to main subject STEPHEN PADDOCK, of the Las Vegas massacre. [REDACTED] has additionally alluded to having additional non-specific information about alleged future mass casualty events. [REDACTED] has requested to be contacted to provide these details to law enforcement in his various postings. Investigation in New Jersey indicates that [REDACTED] was receiving Supplemental Security Income Disability payments from the SSA. Investigation further indicates that [REDACTED] may have moved to [REDACTED].

The Newark Division of the FBI is requesting the assistance of the SSA-OIG in identifying any address that may pertain to [REDACTED] contained in the databases of the SSA that would assist in locating [REDACTED].

Submitted Text:

[REDACTED]
[REDACTED] Tonight I found a new domain that expired called
LASVEGASATTACK.COM. It looks like this domain was originally purchased
in 2010 by someone who held onto until this year when it expired. [REDACTED]

[REDACTED]
[REDACTED] I think someone should look into the
history and see why it was owned since 2010. Just a suggestion. Good
luck!

Title: (U) PAL2018 [REDACTED] E-Tip: Las Vegas Shooting
Re: 4 LV 2215061, 03/16/2018

Final Pre-Assessment Finding:

Writer conducted open source and subscription-based internet analysis of the domain lasvegasattack.com. Open source information obtained from the websites Passivetotal.com, Archive.org, Who.is, and Maxmind.com. Subscription-based information obtained from the websites Domaintools.com and Farsight. The following was identified:

The domain lasvegasattack.com was initially created by GoDaddy.com in 2005, but first registered for use 09/20/2007 by "Edge Capital Investments Company" with an address in Hackettstown, NJ. The technical and administrative contact for the domain was listed as [REDACTED]

[REDACTED] The address for Edge Capital Investments Company was changed in 2008 to New York City, NY. The registrant for the domain remained the same until 7/23/2012, when it likely expired.

b6
b7C

The domain resolved to numerous IP addresses between 2007 and 2012 and became unresolvable (no IP assignment) in July 2012, which coincides with the presumed expiration.

The domain was again registered on 10/2/2017, the day after the Las Vegas Shooting, by Domains by Proxy, a GoDaddy company. The actual customer of GoDaddy who registered the domain is unknown, and cannot likely be determined without legal process.

According to Domaintools.com records updated 3/13/2018, the website contained the title "Deadliest American Mass Shooting - Las Vegas Shooting." All records show that lasvegasattack.com does not currently resolve to an IP address and site, if it exists, cannot be accessed via the Internet. The Wayback Machine (archive.org) only showed one archived snapshot of lasvegasattack.com from 2011. The archived site appeared to a domain parking site offering the domain name for sale.

Activity associated with the site was observed between 10/2/2017 and 12/12/2017. The nature of that activity is unknown and cannot be determined without additional information. The most recent IP address

Re: 4 LV 2215061, 03/16/2018

b7E

associated with lasvegasattack.com, [REDACTED] was also associated with more than 2,000 other website domains.

At the time of this report, the only known association between the domain lasvegasattack.com and the shooting that occurred in Las Vegas on 10/1/2017, began on 10/2/2017. Writer opines that this domain was used for unrelated purposes up until 2012 when it was abandoned. The domain was left dormant until it was reused beginning on 10/2/2017, after the Las Vegas shooting. Writer further opines that the domain was likely re-registered as a way of publicly communicating information or opinions about the Las Vegas mass shooting and not used by the shooter Stephen Paddock.

Collected From: Non-Custodial [redacted]

b6
b7C

Receipt Given?: No

Holding Office: LAS VEGAS

Details:

On 05/31/2018, Special Agent (SA) [redacted] provided one (1) cassette tape to ELSUR Operations Technician (EOT) [redacted].

Cassette tape contains a recorded Non-Custodial interview with [redacted] on 05/31/2018 in [redacted]

Interviewing agents are SA [redacted] and SA [redacted]

EOT [redacted] placed the cassette tape into temporary storage.

On 06/04/2018, EOT [redacted] removed the cassette tape from temporary storage for downloading.

EOT [redacted] downloaded cassette tape to one (1) CD at approximately 9:52 AM on 06/04/2018.

After reviewing the original CD for proper download, it was discovered that the voice recording is at a high pitch. EOT [redacted]

Derivative Evidence (DE):

HQQ013394 DVD, Results of Examination.

Summary:

The Electronic Device Analysis Unit (EDAU) was requested to process the submitted evidence.

Details:

All submitted evidence items were labeled and photographed. Additionally, the following procedures were performed.

The flash memory of the HQQ010313 specimen was removed and imaged. The image of the HQQ010313 specimen was searched for logical and deleted user data.

The flash memory of the HQQ010314 specimen was removed and imaged. The image of the HQQ010314 specimen was searched for logical and deleted user data.

All results can be found on the DVD labeled HQQ013394.

All submitted evidence and generated derivative evidence is being returned to the contributing field office via Operational Technology Division (OTD) Evidence Control. HQQ010313 was previously returned on March 28, 2018. At this time, EDAU considers this examination complete. The case notes, a copy of all generated results, and supporting documents are being retained within the OTD case file.
